AB The disclosure relates generally to niacin-based pharmaceutical compns. that include at least one pharmaceutical agent capable of treating a niacin-induced side effect, such as flushing, hyperglyceremia, pruritis, a gastrointestinal side effect and hyperuricemia. Accordingly, one aspect of this disclosure is a pharmaceutical composition for delivering niacin to a patient in need thereof, wherein the composition comprises a therapeutic dose of niacin and a therapeutically ED of at least one pharmaceutical agent capable of reducing an adverse side-effect of niacin in the patient, and wherein the pharmaceutical agent is delivered to the patient jointly with the niacin, preferably as a single dosage pill or tablet. Thus, 13 patients, who initiated sustained-release niacin therapy using 81 mg of aspirin for prevention of flushing, continued to have debilitating flushing. They were then treated with a more potent NSAID, together with a proton pump inhibitor (PPI) to prevent gastrointestinal (GI) complications. Instead of aborting their niacin therapy, 12 patients were able to continue. The flushing was abolished or was made tolerable, with no NSAID-related GI complications.

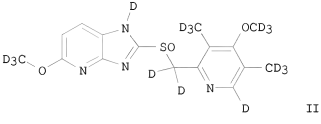
I



II

AB The title compds. with general formula I [wherein R1 = -C(R11)(R12)(R13); R2 = -C(R14)(R15)(R16); R3 = -C(R17)(R18)(R19); R4 = -C(R20)(R21)(R22); R5 - R22 = independently hydrogen or deuterium, with the proviso that at least one of R5 - R22 is deuterium, and when R17, R18, and R19 are each deuterium, then at least one of R5, R6, R7, R8, R9, R10, R11, R12, R13, R14, R15, R16, R20, R21, and R22 is deuterium] or pharmaceutically acceptable salts, solvates, or prodrugs thereof were prepared as proton pump modulators. For example, 2-mercapto-5-(methoxy-d3)-3H-imidazolo[4,5-b]pyridine (preparation given) was reacted with methanesulfonic acid d9-3,5-dimethyl-4-nitro-pyridin-2-ylmethyl ester (preparation given) for d12-2-[[(3,5-dimethyl-4-nitro-2-pyridinyl)methyl]thio]-5-methoxy-1H-imidazo[4,5-b]pyridine, which was then reacted with d3-sodium methoxide in d4-methanol, oxidized with MCPBA, and finally treated with deuterium oxide to give II as a final product. The invention compds. were evaluated for their proton pump modulatory activity.

AB Disclosed herein are substituted benzimidazole-based proton pump modulators of formula I, processes of preparation thereof, pharmaceutical compns. thereof, and methods of use thereof. Compds. of formula I wherein R1 is CR14R16R17; R2 is CR18R19R20; R2 - R20 are independently H and D; provided that at least one of R3 - R20 is D; and pharmaceutically acceptable salts, solvates and prodrugs thereof, are claimed. Example compound II was prepared by a multistep procedure. The invention compds. were evaluated for their proton pump modulatory activity (some data given).

AB Pharmaceutical compns. comprising a proton pump inhibitor, one or more buffering agent and a nonsteroidal anti-inflammatory drug are described. Methods are described for treating gastric acid-related disorders and

treating inflammatory disorders, using pharmaceutical compns. comprising a proton pump inhibitor, a buffering agent, and a nonsteroidal anti-inflammatory drug. For example, a powder for suspension formulation contained omeprazole 20 mg, ibuprofen 400 mg, sodium bicarbonate 1895 mg, Xylitol 300 (sweetener) 2000 mg, sucrose (sweetener) 1750 mg, sucralose (sweetener) 125 mg, xanthan gum 17 mg, peach flavor 47 mg, and peppermint 26 mg.

AB The invention relates to a solid pharmaceutical formulation characterized by containing granules or tablet of a proton pump inhibitor (PPI), and granules of a nonsteroidal antiinflammatory agent (NSAID), wherein the addition of the PPIN in the formulation prevents gastrointestinal injury due to NSAID. For example, a capsule containing lansoprazole granules (lansoprazole 30 mg) and diclofenac sodium sustained-release granules (diclofenac sodium 100 mg) was formulated.
